Profile

I'm a Full-Stack MERN Developer who loves bringing complex ideas to life. I specialize in building fast, scalable, and real-time applications—the kind that need to handle heavy traffic and deliver instant updates. I use the MERN stack (React, Node.js, Express, MongoDB) as my core toolkit, and I'm skilled in everything from setting up robust REST APIs and authentication to integrating next-level features using AI/ML. My goal on any project is simple: collaborate closely, optimize performance on both the front and back end, and ship production-quality features that users will love.

Education

Dr. APJ Abdul Kalam Technical University 2022-2026
Bachelor in Technology(CSE)

YMCA School 2022
Class 12th

Experience

Front end developer Intern January 2024-April 2024
Altvision Technologies

- Collaborated with cross-functional teams to gather requirements, enhance UI/UX, and deliver robust solutions.
- Developed scalable web applications using **JS, React, Node.js**, and managed database design and operations with **MySQL**.

Technical lead
GeeksforGeeks SRMCEM October 2024

- Organized and facilitated coding competitions, hackathons, and technical workshops, fostering strong community engagement.
- Mentored peers in **Data Structures, interview preparation, and coding challenges**, guiding both technical growth and problem-solving skills.

Projects

Web App Income Classification — Personal Project September 2024

- Developed an interactive web application to predict income levels (above/below 50K) using census data.
- Enabled users to easily upload a CSV, choose between machine learning models, and instantly view clear predictions with accuracy and key insights in a simple, user-friendly interface.

AI-Powered Health Consultation Platform — Hackathon Project November 2024

- Spearheaded the development of an AI-driven health advisory platform that interprets patient reports and delivers personalized medical recommendations.
- Created an interactive chatbot to make healthcare guidance more accessible, improving patient engagement and simplifying inquiries.

Skill Assessment Ai ChatBot — Personal Project August 2025

- Built an AI-powered chatbot that tests users' knowledge on chosen skills, provides performance ratings, and generates tailored learning roadmaps.
- Implemented using **React, MongoDB, Firebase, and NLP-based APIs**, ensuring real-time assessments, data storage, and intelligent feedback delivery.

Skills

Languages: JavaScript, TypeScript (if known), Python, C++

Database MongoDB, MySQL

Frontend Backend: React.js, React Native, Tailwind CSS, Node.js, Express.js, REST APIs,
